

Reid Collins

Brooklyn, NY | hire.reid.collins@gmail.com | linkedin.com/in/reidcollins

SUMMARY

Senior Technical Program Manager and Backend Engineer with a hybrid background in software development and program leadership. Experienced leading large-scale platform migrations and building production systems on AWS, including backend services, data pipelines, and observability frameworks. Proven ability to drive complex initiatives while remaining hands-on.

PROFESSIONAL EXPERIENCE

Marigold (acquired by Zeta Global)

Senior Technical Program Manager / Backend Engineer
2021 – 2026

Program Leadership & Delivery

- Led migration from Phabricator to Bitbucket across teams, including repo migration, branching redesign, and bot integration
- Led migration from on-prem Jira to Jira Cloud, defining scope, redesigning workflows, and managing contractor execution within budget
- Led team execution processes, including sprint planning, backlog grooming, and retrospectives; maintained Jira board accuracy and workflow discipline to improve delivery consistency in a Kanban environment

Platform & Backend Systems

- Implemented a containerized API proxy and token system, owning application logic and token workflows; partnered with SRE on ECS/Fargate deployment
- Led migration from Oracle to MySQL, including schema reconstruction, CSV-based data migration, removal of Oracle-specific constructs, and fallback sync mechanisms
- Supported migration of image caching from Akamai to Cloudflare via application changes and client certificate coordination
- Developed backend modules for authentication, campaign data, service health, DynamoDB integration, and high-throughput external platform communication
- Created Swagger/OpenAPI documentation and partnered with teams to support API integration

Machine Learning / Data Platform

- Contributed to a serverless ML pipeline for Propensity-to-Purchase using Lambda, SQS, EventBridge, and SageMaker

- Built data prep workflows using Athena, Feature Store, and S3; supported model training and inference
- Led client onboarding: defined data requirements, sourced historical data, mapped events to users, and backfilled Feature Store datasets

Observability & Reliability

- Built a custom observability framework (structured logging, tracing, Prometheus metrics), Grafana dashboards, and alerting integrations with monitoring teams

Cheetah Digital

Technical Program Manager / Software Developer

2015 – 2021

- Scrum Master and technical contributor across engineering teams, supporting Agile delivery and sprint execution
- Coordinated engineering, SRE, and release teams to deliver platform improvements
- Contributed to backend systems and data processing pipelines
- Worked directly with clients on integrations and troubleshooting

CheetahMail / Experian

Software Developer

2008 – 2015

- Improved reporting performance using SQL*Loader to bulk-load high-volume data
- Built nightly ETL workflows for client data feeds (text/XML) into BerkeleyDB/CDB structures
- Supported client onboarding and API integrations with sales and technical teams

TECHNICAL SKILLS & EDUCATION

Languages: Python, Perl, Ruby, Bash

AWS: ECS/Fargate, Lambda, SQS, EventBridge, SageMaker, S3, Athena

Data: MySQL, PostgreSQL, ClickHouse, Hive, DynamoDB

Observability: Prometheus, Grafana, custom metrics, structured logging

Tools: Git, Bitbucket, Jira, Confluence, Swagger/OpenAPI, Docker, GitHub Copilot, Cursor

Education: Bachelor of Arts, International Relations — Tulane University
